

SMRUTISHREE MISRA

B. Tech ECE • VSSUT Burla • CGPA 8.92 • 2024–2028

smrutishreemisra@gmail.com • 91-7854930118 • [GitHub](#) • [LeetCode — 250+ Problems Solved](#) • [Portfolio](#)

EDUCATION

VSSUT, Burla — B. Tech, Electronics & Communication Engineering

Coursework: DSA, DBMS, Computer Networks, Operating Systems, OOP

2024 – 2028

CGPA: **8.92 / 10**

TECHNICAL SKILLS

PROFICIENT

Languages Java, Python, C++, JavaScript, SQL

Backend Node.js, Express.js, Flask, REST APIs

Frontend React, Next.js, HTML/CSS

Databases Oracle DB, MongoDB, MySQL

FAMILIAR

Cloud/Tools OCI, Docker, Git/GitHub, Vercel, Postman

ML/AI Scikit-learn, Pandas, NumPy

Familiar Django, Firebase, React Native, PostgreSQL

WORK EXPERIENCE

Full-Stack Web Development Intern • **Vault of Codes**

June 2025

- Shipped 3 responsive, production-ready UI modules in HTML/CSS/JavaScript, reducing average page load by ~20% via code splitting and lazy loading.
- Followed Git-based agile workflows — branching, PRs, code reviews — deployed on Vercel with zero downtime.

AI / ML Engineering Intern • **IBM Skills Build**

Aug 2025

- Built reusable preprocessing and evaluation pipelines using Scikit-learn and Pandas, cutting data preparation time by ~35% across multiple structured datasets.
- Trained and compared classification models; improved validation F1-score from 0.74 → 0.88 through feature selection and hyperparameter tuning.

PROJECTS

URL Shortener — Scalable Redirection Service | *Node.js, Express.js, MongoDB, React*

[GitHub ↗](#)

- Designed a RESTful URL shortening service using collision-resistant base62 encoding with O(1) DB lookup; handles 50+ concurrent requests in local load tests.
- Built a React dashboard with real-time click analytics and environment-based config, deployed end-to-end on Vercel.

Crop Yield Prediction System [SIH 2025 — Round 1 Qualifier] | *Python, Flask, React,*

MongoDB, ML

[GitHub ↗](#)

- Developed a full-stack AI app — Flask REST API + React frontend + MongoDB — predicting crop yield from soil/weather inputs; qualified Round 1 from 100,000+ national entries.
- Benchmarked Linear Regression vs. Random Forest; RF improved RMSE by 28% after feature importance pruning and cross-validation.

Credit Card Fraud Detection Engine | *Python, Scikit-learn, Pandas, NumPy*

[GitHub ↗](#)

- Tackled severe class imbalance (0.17% fraud rate) via SMOTE + StandardScaler; boosted fraud recalls from 81% → 93% without sacrificing precision.
- Structured as a modular Python package (ingest → features → train → evaluate) to simulate production ML code organisation.

ACHIEVEMENTS

- 200+ LeetCode problems solved** (arrays, trees, graphs, DP, binary search) — targeting 350+ before internship start.
- Smart India Hackathon 2025 — Round 1 Qualifier** (top ~300 teams / 100,000+ participants nationally).
- Shortlisted by Flipkart** in resume screening during Flipkart **GWC 7.0**.
- Matriculation 94% • Intermediate 84%** (JNV Surangi, Ganjam) — consistent academic performer.
